碳中和之塔

Tower of carbon neutralization

在那个机器轰鸣、
蒸汽纷腾的工业年代的激情消却时，
留下的会是什么？
——沧桑的砖墙与混凝土早已失去了往昔的骄傲，
变得粗糙不堪。
唐河边遥望夕阳的冷却塔便是其中的一员，
曾经它的胸腔中奔涌着沸腾与冰冷的呐喊，
如今却早已是人去楼空，
只有它厚实的外壁还在诉说着一个时代的记忆。

Roar in that machine,
When the passion of the steamy industrial age fades,
What will be left?
——The vicissitudes of brick walls and concrete have long lost the pride of the past,
Become rough and unbearable.
One of them is the cooling tower looking at the sunset by the Tang River.
There used to be boiling and cold shouts in its chest,
Nowadays, people are already emptying the building,
Only its thick outer wall still tells the memory of an era.

BACKGROUND

DESIGN DESCRIPTION

位于唐山市陡河边的冷却塔是启新水泥厂生产线的一部分，启新水泥厂始建于1889年，是我国最早水泥企业。生产的水泥占国内市场份额一度超过了90%并远销海外，为我国水泥工业和社会建设作出了巨大贡献。到2008年，启新水泥厂已完成了其特有的历史使命，为了响应国家产业升级、节能降耗号召而停产搬迁，冷却塔也一度闲置至今。

The cooling tower located by the Douhe River in Tangshan City is part of the production line of Qixin Cement Plant, which was founded in 1889 and is the earliest cement company in my country. The cement produced once accounted for more than 90% of the domestic market share and was exported overseas, making great contributions to my country's cement industry and social construction. By 2008, Qixin Cement Plant had completed its unique historical mission. In response to the national call for industrial upgrading, energy conservation and consumption reduction, it had suspended production and moved, and the cooling tower has been idle for a while.

ANALYSIS

BASE INTRODUCTION

The site is located on the bank of the Tang River, next to the 1889 Cultural and Creative Industrial Park, with railroad tracks passing through on one side, and the train full of memories of the times drove far away, bidding farewell to the hustle and bustle of the industrial age, and bringing a new era of green technology and technology.

CHINA HEBEI TANGSHAN

VISION

ENERGY SAVING ANALYSIS

2021年4月，习近平主席在联大会上向世界作出庄重承诺，中国将力争2030年前实现碳达峰、2060年前实现碳中和。从碳达峰到碳中和，中国设定的过渡期仅为30年，减碳之路充满压力和挑战。我国建筑面积规模位居世界第一，每年仅建筑“运营碳排放”就达到21亿吨，约占我国碳排放总量的20%，是名副其实的碳排放“大户”。因此，建筑行业的节能减碳是我国实现碳达峰、碳中和目标的关键一环。为了降低建筑碳排放，本次建筑设计我们引入“光电建筑”（PV BUILDING）概念，探索新型光伏建材与传统建筑的结合之道，将建筑节能愿景由超低能耗建筑向正能源建筑推进。

In April 2021, President Xi Jinping made a solemn promise to the world at the UN General Assembly that China will strive to achieve carbon peaks by 2030 and carbon neutrality by 2060. From carbon peak to carbon neutrality, the transition period set by China is only 30 years, and the road to carbon reduction is full of pressure and challenges. my country ranks first in the world in terms of floor space. The annual "operational carbon emissions" from buildings alone reach 2.1 billion tons, accounting for about 20% of my country's total carbon emissions. It is a veritable "larger" of carbon emissions. Therefore, energy-saving and carbon-reduction in the construction industry is a key part of my country's goal of achieving carbon peak and carbon neutrality. In order to reduce building carbon emissions, we introduced the concept of "PV BUILDING" in this building design to explore the combination of new photovoltaic building materials and traditional buildings, and promote the vision of building energy efficiency from ultra-low energy buildings to positive energy buildings.

碳中和之塔 Tower of carbon neutralization

碳中和之塔

Tower of carbon neutralization

我们撷取它的苦闷与落寞，并为其注入了新时代的技术与造型：将部分壁板替换为轻盈的玻璃幕墙，映照着唐河粼粼的波光；在筒壁外侧延结构设置两处观景台，一个朝向唐河，供人咏叹河畔美景，一个正对水泥厂旧址，使人追忆曾经工业时代的荣光。游客可以顺着室内的环形楼梯缓缓上升，看时代更迭，看身旁由石板厚重，到幕墙清澈透亮，看从工业时代到现代化的转变，我们究竟获得了什么？于是，我们便在冷却塔的周围缠绕了一圈轻盈的“纱”，全部由光伏板所构成，像是破土而出的鲜嫩春笋、又像是乘风而起的一双强健翅膀，其产生的电能能够供给市民的日常生活，让冷却塔在当下这个时代也被赋予了新的使命。

We captured its sorrow and loneliness, and injected it with new-age technology and modeling: replacing part of the siding with a light glass curtain wall, reflecting the sparkling waves of the Tang River; and setting two locations on the outer side of the tube wall The viewing platform, one facing the Tang River, is for people to admire the beauty of the river, and the other is facing the old cement factory site, which reminds people of the glory of the industrial era. Visitors can slowly ascend the circular staircase inside, watching the changing times, watching the thick stone slabs next to them, to the clear and translucent curtain wall, watching the transformation from the industrial age to modernization, what have we gained? As a result, we wound a circle of light "yarn" around the cooling tower, all composed of photovoltaic panels, like fresh spring bamboo shoots emerging from the ground, and like a pair of strong wings rising in the wind, which produces Electricity can supply the daily life of citizens, so that cooling towers have also been given a new mission in this era.

STREAMLINE ANALYSIS

■ 环绕流线
随着螺旋而上，的应转楼梯，围绕建筑内部面环而上。行人随着不断抬高的应转楼梯逐渐上升，逐渐领略更多风景。

■ Circumfluence streamline
Along with the winding spiral staircase, around the inner surface of the building, pedestrians gradually rise with the rising spiral staircase, and gradually enjoy more style.

■ 漫步流线
在空旷的底部能内部漫步行走，在拥有许多细柱的空间里，仿佛置身于静谧的竹林中，足以供人休闲和放松。

■ WALKING IN THE STREAMLINE
Strolling in the empty bottom podium, in the space with many thin columns, it is as if you are in a quiet bamboo forest, which is enough for people to relax and relax.

■ 观景流线
行走至台阶顶端时，可进入两个不同区域和高度观景平台。低侧的观景平台可以看到唐河波光粼粼的水面，高侧的则可以看见1889工业园区。

■ VIEW STREAMLINE
Walking to the top of the spiral staircase, you can enter two viewing platforms of different areas and heights. The viewing platform on the low side can see the sparkling water of the Tang River, and the 1889 Industrial Park on the high side.

■ 驻足流线
站在台阶顶部向下俯瞰，驻足于螺旋楼梯向高处仰望，都会使人感受到不一样的体验。

■ VIEW STREAMLINE
Standing at the top and looking down, stopping at the bottom and looking up at a high place will make people feel a different experience.

FUNCTIONAL ANALYSIS

■ 入口空间
建筑底部位置作为整体建筑的入口空间，在这里保留原始冷却塔墙体和圆柱造型，用裸露的结构和具有历史感的材料带使人们回忆起那个时期的过程，并带领着走向内部的新空间。

■ Entrance space
The podium at the bottom is used as the entrance space of the overall building, where the original cooling tower walls and thin columns are preserved. The exposed structure and historical materials lead people to recall the dusty past and lead them to the inside. New space.

■ 观景平台
塔身和外表皮之间由楼梯平台的延伸形成休闲娱乐的观景平台。由不同高度和角度可观察到不同的景色，阳光从幕墙中的缝隙间倾泻而下，使人在现实和历史中轮流走过。

■ Viewing platform
Between the tower body and the outer skin, the extension of the stair platform forms a viewing platform for leisure and entertainment. Different scenery can be observed from different heights and angles. Sunlight sprinkles mottledly from the gaps in the curtain wall, making people walk through in turns in reality and history.

■ 楼梯空间
利用冷却塔内部无过多装饰的内壁，钢结构螺旋楼梯从底部蜿蜒向上，即是逐步向上的交通纽带，也是塑造空间营造的关键要素。

■ Stair space
Utilizing the inner wall of the cooling tower without too much decoration, the steel spiral staircase winds upwards from the bottom, which is the traffic link for strolling upwards and the key element of relaxing space creation.

■ 中庭空间
螺旋楼梯形成的中庭空间还原了冷却塔的内部原始样貌，圆形的开口营造出神圣的气氛，给人以足够的视觉美感。

■ Atrium space
The atrium space formed by the spiral staircase restores the original appearance of the cooling tower, and the circular opening creates a sacred atmosphere, giving people enough visual beauty.

- 河北大学宋史小院课程设计

河北大学宋史小院设计

宋史小院设计名为“照影庭”，取自宋词《生查子·独游雨岩》“溪边照影行，天在清溪底。天上有行云，人在行云里。”起伏跌宕的弧面屋顶像是一座座隐秘而又孤高的山峦，结合清晨或傍晚时分从格栅中透出的柔柔暖光，整个小院好似浑然一体，玲珑剔透，静卧在校园的一角。

踩着细碎悠长的木栈道，在雕花窗下吟诵烟雨江南下的诗情画意。而环绕着照影庭的，是纵横交错的水院清溪，漫步于此，悠然惬意。庭内设有书吧沙龙，或两三挚友，或大咖云集，激昂文字，好不惬意！更有回廊转折，讲厅豁然，不禁追忆漆侠先生，创一代宋史传奇，遂作照影庭，映先生风骨，映云上清溪。

生查子·独游雨岩

（宋）辛弃疾

溪边照影行，天在清溪底。
天上有人行，云在清溪里。
人在行，云在行，云在行。
空谷清音起。
一曲桃花水。

照影庭映照，远山之景。
可携挈友二三，共赏庭院之趣。
院落明亮敞然，檐角起伏变化，中有三木成山林，直至夜半，明月高悬，万千夜思奔涌而来。

至于白昼时分，孩童嬉笑玩耍，书生挥斥方道，夫子桃李成林，安适祥和之气油然而生。

待酒酣兴尽，看云雾散去，群山复苏，照影庭不见，霞云秋水犹在。

十 圓野原

Circulation Nature Theater

■ 设计说明

本次方案取名为圓野原，分别代表着剧院不同的组成元素，圓即为圆形，在设计中从平面至立面都由圆形元素来构成，无论是向心式发散的平面、圈圈跌落的台阶还是弧形的片墙高低错落、环形水池中映射着粼粼波光，都在表征着圆形的符号意象，代表中国文化中所特有的兼收并蓄的包容与谦和。野则表示着自然与野性的美，建筑开敞自由的环形回廊和向外延伸的亲水平台打破了道路带来的严整框架的限制，使建筑的内外空间有了更为自然流畅的过渡，同时也突破了传统的剧院空间形式，让人的视野变得更为开阔、自由。圓与野的碰撞，便构成了此次的剧院设计，脱离了大型的中庭与挑空空间，将庭院之美与观景手法融入建筑的细部，由此便组成了本次设计的整体。

This project is named Huan Nohara, which represents different elements of the theater. The design is composed of circular elements from the plan to the façade, whether it is the centripetal plane, the falling steps, the curved walls, the shimmering waves in the circular pond, all represent the symbolic imagery of the circle, which represents the tolerance and modesty of Chinese culture. The building's open and free circular corridor and waterfront terrace break the restriction of the strict framework brought by the road, making the internal and external space of the building more natural and smooth, and also break through the traditional theater space form, allowing people's vision to become more open and free. The collision of huan and wild constitutes the design of this theater, which is free from the large atrium and void space, integrating the beauty of courtyard and view into the details of

- 保定市高层办公楼设计

设计说明 Design Notes

方案主体形象由保定特殊的地理位置演化而来，左拥太行山脉，右临白洋淀水域，结合二者不同的性质与特点，拟合出山水相融的建筑形态，其中高层办公部分为右峰，低层的裙楼部分为水的形态，从而形成保定的自然风貌。

在办公部分层层叠叠而开将建筑延伸并环绕多座平台为办公提供更为灵活的人流组织与视野，同时特殊建筑的上平面的收拢也为裙楼带来更为丰富多变的造型，其他楼层则采用与东西向并行的立体系统平台，点阵式设置，并为保定市高层建筑提供更为丰富的可能性，立面上采用木格栅与木板的部分运用也在呼应着保定历史文化古城的韵味，以历史为底蕴，以未来为方向。

The main imagery of the project evolves from the unique geographic location of Baoding, with the Taihang Mountains on the left and the Baiyangdian Waters on the right, combining the different nature and characteristics of the two to create a combination of mountain and water architectural forms, with the mountain peaks in the high-rise office part and the water form in the lower podium part, showing the local nature of Baoding.

In the office part, the stacked and extended circular walkway platform around the building provides more flexible staff flow and vision, while the contraction of the planes on specific levels brings a richer and more varied shape to the block, which creates two three-dimensional green platforms in the southwest and southeast directions, lighting up the neighborhood space and bringing more possibilities for the exploration of high-rise landmark buildings in Baoding. The use of wooden grilles and panels on the facade echoes the traditional identity of Baoding as a historical and cultural city, with history as the background and the future as the direction.
